

The schematic diagram illustrates the power supply circuit for the REMILME-6 POWER CN1. It begins with a 9V battery connected to a 1K Ω resistor and a 0.1 μ F capacitor. The output of the battery is connected to a diode D1 (IN5819) in series with a diode D2 (IN5819). A 1N5819 diode is also connected in parallel with the output. The output voltage is regulated by a TS220G voltage regulator (REG2), which is powered by a 3V VCC source. The output of the regulator is connected to a 3.3V VCC source. The output of the 3.3V VCC source is connected to a 7805 voltage regulator (REG1), which is powered by a 5V VCC source. The output of the 7805 regulator is connected to a 5V VCC source. The output of the 5V VCC source is connected to a 5V VCC source.
